

PROBLEM STATEMENT

PROJECT NAME	VEHICLE MANAGEMENT USING SALESFORCE
--------------	-------------------------------------

The current vehicle management system in our organization lacks efficiency, transparency, and real-time tracking capabilities. This leads to challenges in maintaining an accurate record of vehicles, their usage, maintenance schedules, and associated costs. Additionally, there is a need for better coordination between various departments involved in vehicle management, including procurement, maintenance, and finance.

The objective of this project is to implement a comprehensive Vehicle Management System using Salesforce, leveraging its robust CRM capabilities and customization features. The system will aim to streamline the entire lifecycle of vehicles, from procurement to retirement, while providing real-time visibility into vehicle status, usage patterns, maintenance schedules, and associated costs.
